

Technical Portfolio Architecture & Project Alignment

Aiman Mamad Hussen
B.Sc. Computer Science
GISMA University of Applied Sciences

June 2026

1 Introduction

This document shows the background design, technical structure and projects hosted in my professional portfolio. Making a simple and accessible platform where i can share the source code of my projects, Academic and personal, throughout my Academical course. The objective of this repository is to track my personal and academic progression, share coding experiments and a clear connection between my studies and active roles in the industry.

2 About Me & Professional Background

I started in technology because of my willing to create something and the creative ideas i have. Before studying Computer Science full-time in Berlin, i worked as an assistance in a mechanic workshop. The hands-on type of work helped me develop the ability to analyze complex physical problems and manage complex problems under pressure. I also worked in the hotel industry, where i developed crucial management skills, improved my teamwork performance, and general communication skills.

Today, I bring this exact problem-solving logic into my software development projects. My academic focus is on computational foundations, web interface implementation, and group game engineering projects using engines like the Godot engine. I look at coding as a practical tool where i can put my toughs in to a real program, tool or game.

3 Core Academic Deliverable & Enterprise Alignment

The first main section of my portfolio is focused on professional integration within the German engineering sector, establishing a direct link between university laboratory standards and active market vacancies.

- **Target Vacancy:** Mercedes-Benz AG — Werkstudentin/Werkstudent Programmierung & Monitoring / Analysedashboards für Fahrzeukinbetriebnahme (Bremen).
- **Industry Synergy:** This role focuses on the commissioning of automotive software and tracking dashboards. My background as a mechanic and my experience in management create a perfect balance with my current Computer Science studies in dashboard creation and data monitoring for a car manufacturer.

<https://www.stepstone.de/stellenangebote--Werkstudentin-Programmierung-Monitoring-Analyse.html>

4 Interactive Projects & Creative Coding

Outside my Academics paperwork, my repository will be used to upload personal projects such as:

1. **Premium Calculator (HTML / CSS / JavaScript):** A custom calculator that i made to critique how everything requires a subscription nowadays. The app works flawlessly as a standard calculator until the equal button is clicked, which triggers a false premium paywall asking for a EUR 9.99 that when accepted shows a special message for the user.
2. **2D Roguelite System (In Development):** An independent game project that i am involved in, focused on object-oriented structures, algorithmic state machines, and physics behaviors using GDScript in the Godot engine. Unfortunately, at the moment i am not allowed to show any projects.

5 Centralized Portfolio Index

All live deployment states and technical source sheets can be tracked through the public nodes below:

- **Live Portfolio Node:** <https://aiman-hussen.github.io/>
- **Root Git Codebase:** github.com/Aiman-Hussen/Aiman-Hussen.github.io
- **Academic Report Asset (PDF):** aiman-hussen.github.io/report.pdf
- **Premium Calculator:** aiman-hussen.github.io/calculator.html
